Ask a question whose answer is not in my PDF
What year was the term “artificial intelligence” first coined?
2 minutes ago
Ask an unrelated question and observe the answer

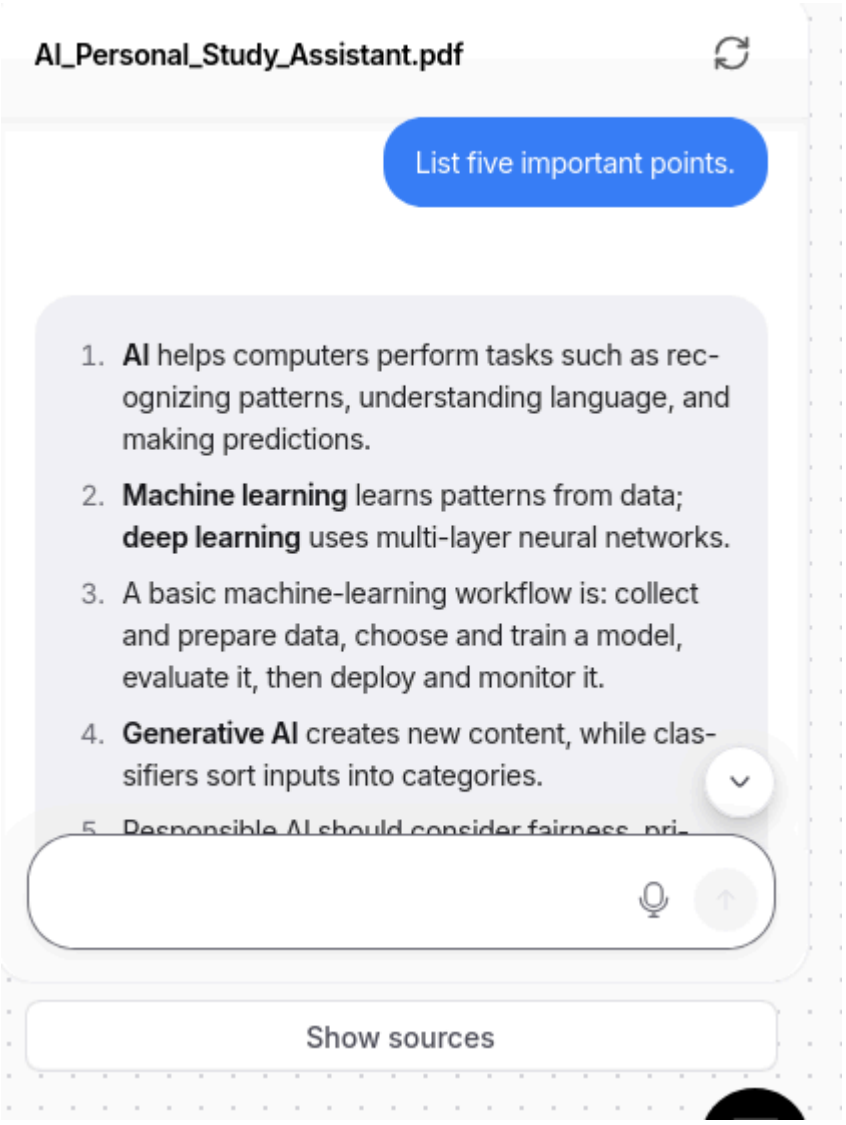

AI_Personal_Study_Assistant.pdf
Compare two topics from my PDF.
Artificial Intelligence vs. Machine Learning
Artificial Intelligence (AI)
Machine Learning (ML)
The broad field of building systems that perform intelligent tasks.
An approach within AI where systems learn patterns from data.
Includes areas such as machine learning, computer vision, and speech AI
Uses examples or data to make predictions or dec
sions

AI_Personal_Study_Assistant.pdf
Prepare short revision notes
Short Revision Notes: Artificial Intelligence
Artificial Intelligence (AI): Systems that perform tasks such as recognizing patterns, understanding language, making predictions, and generating content.
Machine Learning (ML): An approach within AI where systems learn patterns from data.
Deep Learning: A type of ML that uses neural networks with multiple layers.

Explain one concept with an example
Machine Learning
Machine learning is when a computer learns patterns from examples so it can make predictions about new information.
Example: A spam filter learns from emails labelled "spam" or "not spam." When a new email arrives, it uses the patterns it learned to predict whether that email is spam.

Give me five multiple-choice questions
Five Multiple-Choice Questions
1. What is Artificial Intelligence (AI)?
A. A method for storing files
B. Systems that perform tasks requiring human-like abilities
C. A type of computer hardware
D. A programming language
2. What is Machine Learning (ML)?

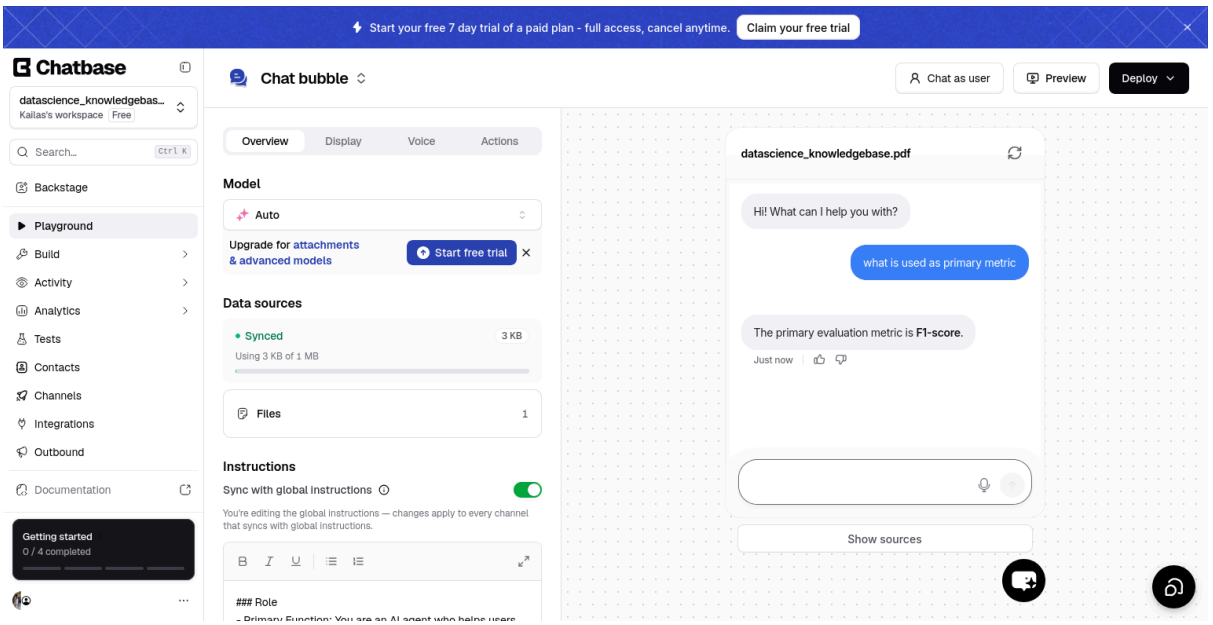

AI_Personal_Study_Assistant.pdf
List five important points.
1. AI helps computers perform tasks such as recognizing patterns, understanding language, and making predictions.
2. Machine learning learns patterns from data; deep learning uses multi-layer neural networks.
3. A basic machine-learning workflow is: collect and prepare data, choose and train a model, evaluate it, then deploy and monitor it.
4. Generative AI creates new content, while classifiers sort inputs into categories.

AI_Personal_Study_Assistant.pdf
Give me a short summary of the PDF
The PDF is a beginner-friendly guide to **Artificial Intelligence** for computer science students. It explains AI and its main areas, including machine learning, deep learning, neural networks, and generative AI. It also covers the machine-learning workflow, how AI systems are evaluated, responsible and ethical AI, useful programming foundations, practice questions, and mini-project ideas.

Explain the first topic in simple words.
What is Artificial Intelligence?
Artificial Intelligence (AI) is a way of making computers perform tasks that usually need human-like abilities. These tasks include understanding language, recognizing patterns, making predictions, solving problems, and creating content.
For example, a voice assistant understands your request, and a recommendation system suggests videos you might enjoy.
